Skills

Languages: C/C++, Java, Python, JavaScript, TypeScript, SQL

Technologies & Tools: ReactJS, Angular 18, Remix, NextJs, Nodejs, Django, FastAPI, Langchain, AI integration, TypeScript, PostgreSQL, MongoDB, Java, Astro, Tailwind, shadcn, Zustand, NextAuth, Material UI, Docker, Linux, CI/CD, AWS, Git, Github, Figma, HTML

Work Experience

NTT DATA EUROPE & LATAM

October 2024 - February 2025

Junior Software Developer

- **Ecommerce Project** - Development of an ecommerce platform using React and TypeScript, focusing on frontend logic and API integration.
 - Implementation and management of custom hooks and application context using useContext for state management.
 - Development of login functionality with authorization and route protection using HOC (High Order Components) and React Router.
 - Unit and integration testing with Jest, including the use of mocks and achieving full project coverage.
 - Application of SOLID principles to ensure clean and maintainable code.
- Technologies: React, TypeScript, Jest, Git, GitHub.

Innovation Cleverly

July 2024 - September 2024

Frontend Developer

- **SISCON Project** - Developed the views for each module of an accounting system using Angular and Tailwind, creating the frontend with Angular, HTML, and TypeScript.
- Implemented the APIs provided by the backend in Swagger, utilizing CRUD operations on the maintenance screens.
- **My Fund Project** - Collective fund management system where I implemented login with token-based authorization, user registration, and views for registering individuals and contracts.
- In both projects, Angular 18 was used, implementing reactive forms, use of signals, and states.
- Technologies: Angular, TypeScript, Tailwind CSS, Git, Gitlab.

Acecom / Skytech

July 2024 - September 2024

Full Stack Developer → Head of Web Development

- Recently promoted to Head of Web Development, leading a team of 10+ developers on various projects within the association.
- Responsible for organizing progress tracking meetings and ensuring project milestones are met across multiple web development initiatives.
- Designed and developed the Acecom website, a platform for a university organization, emphasizing internationalization through i18n and the Remix framework to deliver a seamless multilingual user experience.
- Integrated AI-based spam filtering to enhance content moderation and improve user interactions.
- Contributed to React Native projects, creating mobile solutions that extended the reach and usability of the platform across devices.
- Developed and integrated webhooks for a Discord bot to send real-time alerts for authentication issues, enhancing security and monitoring across the system.
- Implemented React Email for automated email notifications, enabling efficient communication management for the organization.
- Designed an interactive platform where members could publish posts, fostering collaboration and content sharing among users.
- Collaborated closely with a team using Scrum methodology, participating in daily standups, sprint planning, and retrospective meetings to align with project goals and deliverables.
- Technologies: Node.js, React, Remix, TypeScript, React Native, AI integrations, i18n, React Email, Webhooks, Discord API, Material UI, Git, GitHub.

- Led the UX/UI design of a website for an incubator, from user research to implementation, using tools like Figma for prototyping and Astro for developing modular components.
- Implemented specific features based on UX research data to optimize the user experience, working closely with the development team to ensure proper integration.
- Ensured the accessibility and usability of the website through rigorous performance testing and code adjustments, optimizing the site for fast loading and smooth navigation.
- Technologies: Astro, JavaScript, Figma, Git, Github, Figma.

- Responsible for designing and developing the MVP of the startups ConsultaYa and CepreSmart, using HTML and CSS to create attractive and functional interfaces from scratch.
- Implemented methodologies such as Design Sprint to streamline the development process and ensure alignment with project goals.
- Technologies: HTML, CSS, Git, Github, Bootstrap, Figma.

Education

Projects

- **Makers Fellowship E-commerce Project (2024):** Developed a full e-commerce website with AI integration within a 24-hour coding challenge. Built an intelligent chatbot using Langraph to create an agent with tools for inventory checking and product information retrieval from a database. The Langraph implementation enabled complex reasoning chains and tool use for dynamic responses to customer inquiries. Implemented a product recommendation system using AI. Technologies: React, FastAPI, Langraph, AI integration.
- **Landing Page for InfoJobs:** Selected by midudev among 7,000 candidates to be part of the project. Worked in an international team with developers from Spain, using Astro and Tailwind CSS, and integrated APIs to implement a dynamic search functionality.
- **Tech Bot (2024):** Developed an AI-powered chatbot integrating LangChain and OpenAI API for context-aware language interactions. Implemented a FastAPI backend with Google OAuth2 for secure authentication and created an interactive React-based frontend. Conducted comprehensive testing with pytest to ensure reliability and code quality. Technologies: FastAPI, LangChain, OpenAI API, React, Google OAuth2, pytest.
- **Hackathon Innovathon BCP (Banco de Crédito del Perú):** Collaborated with a multidisciplinary team of students from UNI and UTEC to present a solution proposal for the problem "How might we encourage Peruvians to prefer digital transactions over cash usage?"
- **Fake Signature Detector with Neural Networks (2023):** Developed a deep learning model using Convolutional Neural Networks (CNN), including image preprocessing for better detection and verification. Technologies: Python, OpenCV, PyTorch, NumPy, Matplotlib.

Awards and Certificates

- **Makers Fellowship (February 2024):** Selected to join an exclusive community of startups, entrepreneurs, and developers under 24 years old focused on creating impactful startups and driving innovation. Gained access to mentorship, networking opportunities, and participated in competitive coding challenges.
- **Solidarity Academic Tutoring:** Provided solidarity tutoring for at-risk students in the Faculty of Science for the course "Introduction to Computing," which focuses on programming logic and C++ language. Classes were held weekly, reinforcing learned topics and solving past exams. The outcome was satisfactory as the student passed the course and left the academic risk condition.
- UX Design on Google Certificates.
- Intermediate Javascript and Python on Cisco Networking Academy.
- English Intermediate Level at ICPNA.
